CLAIMS

What we claim is:

A method of generating an HIV-specific cytotoxic T-cell (CTL) response in a host, which comprises:

administering to the host a T-helper molecule to prime T-helper cells of the immune system of the host, and

subsequently administering to the host a mixture of said T-helper molecule and a T-cell inducing HIVderived molecule to generate an HIV-specific T-cell response in the host.

- The method of claim 1 wherein said T-helper molecule is selected from HLA class II restricted Thelper epitopes.
- The method of claim 2 wherein said T-helper epitopes are selected from the group consisting of DP, DR and DQ-specific T-cell epitopes.
- The method of claim 2 wherein said T-helper molecule is CLP-243 (SEQ ID NO:10).
- The method of claim 1 wherein said T-helper molecule is administered with an adjuvant.
- The method of claim 1 wherein said T-cell inducing HIV-derived molecule includes a peptide corresponding to a portion of an HIV-1 antigen and containing at least one T-cell epitope.
- The method of claim 5 wherein said peptide correspond to sequences of the Rev protein of HIV-1.
- The method of claim 6 wherein said peptide is a lipopeptide.
- method of claim 8 wherein the lipid The palmitovl or cholesterol.
- The method of claim 7 wherein said lipopeptide is CLP-175 or CLP-176.
- The method of claim 6 wherein said mixture is administered with an adjuvant.

20

- 12. A peptide having an amino acid corresponding to amino acids 52 to 116 (SEQ ID No:9) of the sequence of the Rev protein of HIV-1 LAI isolate and containing T-cell epitopes within amino acids 63 to 73 (SEQ ID NO:3), 74 to 83 (SEQ ID NO:5) and 102 to 110 (SEQ ID NO:8), or having a corresponding amino acid sequence from another HIV-I isolate.
- 13. The peptide of claim 12 in the form of a lipopeptide.
- 14. The peptide of claim 13 wherein the lipid is palmitoyl or cholesterol.
- 15. The peptide of claim 13 wherein the lipopeptide is CLP-175 or CLP-176.
